Design of Fast Bunch Switching Line in PAL-XFEL

Thursday, November 14, 2024 1:00 PM (1h 30m)

We present the conceptual design for the fast bunch switching line in PAL-XFEL. Currently we are servicing both hard X-ray line and soft X-ray line by switching the single bunch's direction in the rate of 30 Hz. Considering the method of ATHOS line in SwissFEL, we have designed a fast kicker line which are possible to send bunches in 60 Hz to the both lines by separating two-bunches generated by two UV pulses. In this presentation, we will show basic concept and preliminary design for the kicker system.
